

How To Create Exchange For Windows Mail.

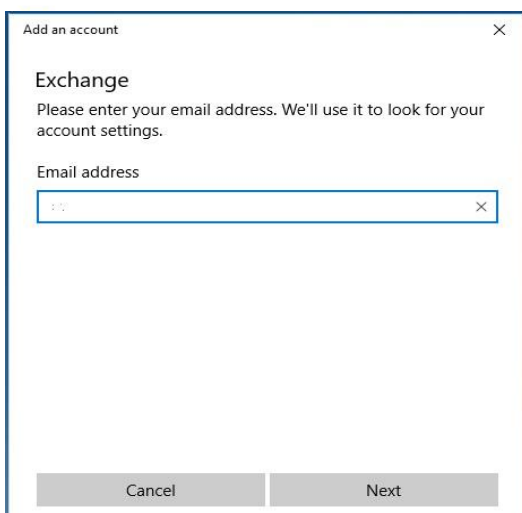

first go to the windows mail icon

then click add account

then choose exchange

Then type in your email address and click next

Add an account

Exchange

Email address

Password

We'll save this information so you don't have to sign in every time.

If you're adding a business Exchange account, your network administrator will be able to remotely delete your content and settings from your device.

Cancel Sign in

And then your password then click sign in

If exchange doesn't let you sign in and it asks for the domain put in something else for the two boxes then the message will come up(left) click advanced
